## PCBs in schools making national news

This week the issue of PCBs in school caulking has hit the national news in a New York Times article as well as CBS This Morning national broadcast. America Unites For Kids has sued the Santa Monica School Board to require removal of all PCB caulking and testing to identify all sources of PCBs after high levels of PCBs were identified in some window caulking at the school several years ago. The TSCA Statute does not require testing to identify sources, but does require removal once sources are identified.

*Regional relevancy:* In March, a PCB inspector from R5 investigated a school in Monroe, WA in response to repeated tips and complaints regarding leaking PCB light ballasts. Preliminary results from wipe samples are expected this week, and Manchester lab has indicated the presence of PCBs in samples above regulated limits. Teachers have previously questioned whether or not the school should additionally investigate caulking at the school. There is potential that this national attention to the issue, coupled with ongoing investigation at the local school, could elevate and expand the scope of the PCB investigation and response in Monroe.
